Delhi, India | [kmlrohilla7065130@gmail.com](mailto:kmlrohilla7065130@gmail.com) | +91 8700455164 | [Portfolio](#) | [GitHub](#) | [LinkedIn](#) | [LeetCode](#)

## Technical Skills

---

**Languages:** TypeScript, JavaScript (ES6+), HTML, SCSS/SASS

**Frameworks & UI:** React 18, Next.js, Redux Toolkit, RTK Query, React Hook Form, MUI 5, Mantine, Tailwind CSS

**Browser & Web APIs:** Fetch, IntersectionObserver, Web Storage, History/Routing, Web Workers, Clipboard, File & Drag-and-Drop

**Testing & Quality:** Jest, React Testing Library, jest-axe, WCAG 2.1

**Tooling:** Vite, Webpack, ESLint, Prettier, Yarn/NPM, Git

**Observability & Analytics:** Sentry, Datadog, Mixpanel, Microsoft Clarity

**Other:** REST APIs, CI/CD, Figma, Performance Optimization, Cross-browser Compatibility, Data Structures & Algorithms

## Experience

---

**Frontend Web Engineer, [Virtual Internships](#)** – London, United Kingdom Dec 2023 – Present

- Architected the **interview scheduling system** end-to-end. Designed a custom **React Big Calendar wrapper** that became the foundation for every scheduling surface — implementing constraint-based slot booking, an availability API surfacing 30-minute interviewer slots, and bidirectional Google Calendar sync via a backend-generated OAuth URL (replaced the client-side SDK to harden the credential flow). Instrumented **Sentry User Feedback** and achieved **4.4/5 satisfaction across 1,000+ bookings**.
- Designed, built, and published **two standalone shared npm packages** — `fe-company-profile` and `fe-intern-profile` — with Rollup-based bundles, semantic versioning, and consumption across the customer-facing app and internal admin console. Architected the package-level **analytics integration** (`trackEvents` prop pattern, build-time-injected keys, async event dispatch for navigation-aware events) and authored the shared **Typography variant system** now used across the project. Drove a **page-load (LCP) optimisation** on the candidate profile header.
- Built the **internship assessment platform** end-to-end — replaced an external vendor tool with a fully in-product flow used by every internship cohort. Designed composable question primitives (scale, subjective, scenario), reflection and review surfaces, progress tracking, keyboard-first navigation, and admin-side filters and columns.
- Shipped the **internship certificate system** as a cross-app feature spanning the admin console and the customer-facing app — **admin-side issuance** with bulk flow, preview adapting to backend API contract changes, and **role-based permission gating** for issue/revoke actions; plus the public and authenticated **viewer surface** with employer cards and share modes.
- Shipped **AI-powered offer creation** that auto-drafts internship offers from candidate profile data — integrated the LLM endpoint, scroll-gated agreement flow, draft-resume support, and a zero-layout-shift drawer entry across desktop and mobile.
- Drove end-to-end the **company invitations feature and Kanban hiring-board redesign** — dual-sided flows across the candidate dashboard and employer hiring board, server-driven rate-limit gating from the create-invitation response, lazy-loaded modals with null Suspense fallback, and **email-to-app deep links** that open destination modals directly from post-interview emails.
- Led the **candidate browse redesign** across three milestones — new filter system with mobile-drawer parity, **AI-generated candidate summaries** on cards, and **Saved Search auto-save with session-resumption banners**. Integrated the new backend search contract and eliminated layout shift on filter changes.
- Led the **EUI / Ant Design → MUI 5 migration** across the platform — converted admin settings, internship management, notifications, video and social-media details, file inputs, and form components. Authored the **custom Typography variant system** in the MUI theme that became the project's standard for all visible text.

- Owned the **employer onboarding flow** — email-domain-restricted signup, auto-join existing companies via domain match, and **Apollo.io-powered company auto-fill** from website URL.
- Delivered admin platform tooling — **unified filter system across 10+ pages**, an **in-house data table** replacing a third-party grid, **placement-rule specialisations** with grouped industry cascader and batch copy-to-all, and **interview request mode** with a hiring-contact onboarding checklist. Reusable component library in **React 18**, **TypeScript**, **MUI 5**, **RTK Query** with **WCAG 2.1 accessibility** enforced via **jest-axe** on every component.

**Software Development Engineer I**, [Housing.com](#) – Gurugram, Haryana

June 2022 – Aug 2023

- Led the complete **dashboard revamp** focused on owner-side engagement, driving a **20% increase in user interactions** through redesigned information architecture and CTA hierarchy.
- Built a new **Package Pricing Overlay** for owner-specific users that drove a **30% lift in CTA conversions** and graduated to 100% rollout within one month.
- Owned the **A/B testing program across 8 features** — designed variants, analysed behavioural data, and optimised key user flows based on conversion insights.
- Revamped the **Leads Page** for owners by merging Potential Leads into a single view, streamlining workflow and improving conversion rates.
- Rebuilt the **package deletion, activation, and repost flow** with a payment-gated modal for free-listing users — ensuring posts only published post-payment and improving transaction handling.

## Education

---

**Delhi Technological University**, B.Tech in Computer Science **Delhi, India**

Aug 2018 – June 2022

- GPA: 8.76/10

## Certification

---

- [Competitive Programming](#)
- [Data Structures and Algorithms](#)
- [Web Development Bootcamp](#) by Angela Yu
